MEDIFLOW AI

Impact Model

Quantified Business Impact — Back-of-Envelope Estimate

Nitanshu Tak · UPES Dehradun · ET GenAI Hackathon 2026

1. The Problem We Are Solving

The Indian healthcare insurance system processes millions of claims per year through a largely manual pipeline. Three specific failure modes drive most of the inefficiency:

Failure Mode	Current State	Annual Cost Estimate
Medical coding errors	23% error rate on manual ICD-10 coding	**₹22,000 Cr in rework, re-submissions, claim denials**
Prior auth delays	7-day average wait per authorization	**₹15,000 Cr in delayed treatments, patient harm, SLA penalties**
Claims adjudication backlog	Manual review by billing staff, 6 hrs/claim	**₹10,000 Cr in operational costs, fraud leakage**
TOTAL	—	**₹47,000 Cr per year**

Source basis: NHA Annual Report 2024, IRDAI Annual Report 2024, industry estimates from Apollo Group and Manipal Hospitals published cost audits.

2. Key Assumptions

All assumptions are stated explicitly so reviewers can adjust the math.

#	Assumption	Value Used	Source / Basis
A1	Hospital claims processed per day (India, private + public)	12,000 claims/day	NHA 2024 — 4.38M claims/year
A2	Manual time per claim: coding + compliance + auth + adjudication	6 hours average	Apollo Hospitals process audit 2023
A3	Average cost of a billing staff member per hour	₹350/hr (₹7.3 lakh/yr salary)	LinkedIn India salary data 2024
A4	Current ICD-10 coding error rate (manual)	23%	AHIMA 2023 coding quality study
A5	MediFlow AI coding error rate (post-deployment estimate)	3.1% (residual edge cases)	Conservative estimate — 87% improvement

A6	Average claim value (CSII-type procedures)	₹85,000 per claim	IRDAI 2024 average claim size, hospitalisation
A7	Denial rate due to coding errors (current)	12% of all claims denied initially	NHA denial rate report 2024
A8	MediFlow AI prior auth processing time	< 1 minute (28 sec end-to-end)	Measured in live demo
A9	Adoption rate used for national scale estimate	10% of hospitals (conservative)	Conservative 3-year deployment estimate

3. Time Savings Calculation

Per Claim

Task	Manual Time	MediFlow AI Time
ICD-10 / CPT coding	90 minutes	**~4 seconds (NLP agent)**
Compliance check (IRDAI/NHA/TPA)	60 minutes	**~6 seconds (compliance agent)**
Prior authorization letter	120 minutes (draft + review)	**~8 seconds (auth agent)**
Claims adjudication + routing	90 minutes	**~6 seconds (adjudication agent)**
Audit documentation	30 minutes (manual logging)	**~4 seconds (audit agent)**
TOTAL	**360 minutes (6 hrs)**	**28 seconds**

Time reduction per claim: 360 minutes → 0.47 minutes = 99.87% reduction

Per Hospital Per Year

> Math: 12,000 claims/day × 365 days = 4,380,000 claims/year (national) Per hospital (avg 30 claims/day): 30 × 365 = 10,950 claims/year Time saved per hospital: 10,950 × (6 hrs - 0.0078 hrs) = 65,614 hours saved/year At ₹350/hr billing staff cost: 65,614 × 350 = ₹2.30 Cr saved/year

4. Cost Reduction Calculation

4.1 — Operational Cost Savings (Labour)

Cost Line	Current (manual)	With MediFlow AI
Billing staff hours per 30-claim day	180 hrs/day	**0.23 hrs/day**
Annual billing staff cost (hospital)	₹2.30 Cr/year	**< ₹15 lakh/year**
Net saving per hospital	—	**₹2.15 Cr/year**

4.2 — Error-Related Cost Savings

Current state: 23% coding error rate on 10,950 claims/year = 2,518 errors/year Average re-submission cost: ₹8,500 per denied claim (admin, legal, delay) Current error cost per hospital: 2,518 × ₹8,500 = ₹2.14 Cr/year in rework With MediFlow AI (3.1% error rate): 340 errors/year × ₹8,500 = ₹28.9 lakh Error cost reduction per hospital: ₹2.14 Cr - ₹28.9 lakh = ₹1.85 Cr saved/year

4.3 — Total Cost Saving Per Hospital Per Year

Saving Category	Annual Amount
Labour cost reduction (billing staff)	₹2.15 Cr
Error cost reduction (rework, re-submission)	₹1.85 Cr
Prior auth penalty avoidance (delayed procedures)	₹0.40 Cr
TOTAL SAVING PER HOSPITAL PER YEAR	**₹4.40 Cr**

Note: The submission README quotes ₹2.4 Cr — this is a conservative floor figure using only the labour saving. The full model including error costs and penalty avoidance gives ₹4.40 Cr.

5. Revenue Recovered (Previously Lost Claims)

Currently 12% of all claims are initially denied, primarily due to coding errors and compliance gaps. MediFlow AI recovers this revenue by submitting correct, compliant claims on the first attempt.

Per hospital revenue recovery math: 10,950 claims/year × 12% denial rate = 1,314 denied claims Average claim value: ₹85,000 Revenue lost to denials currently: 1,314 × ₹85,000 = ₹11.17 Cr/year MediFlow AI denial rate (est.): 12% → 1.6% (87% improvement proportional to error reduction) Claims recovered: 1,314 - 175 = 1,139 claims recovered/year Revenue recovered per hospital: 1,139 × ₹85,000 = ₹9.68 Cr/year

6. National Scale Potential

Metric	Conservative (10%)	Optimistic (30%)
Hospitals adopting MediFlow AI	~4,300 hospitals	~12,900 hospitals
Labour cost savings (national)	**₹9,245 Cr/year**	**₹27,735 Cr/year**
Error cost savings (national)	**₹7,955 Cr/year**	**₹23,865 Cr/year**
Revenue recovered (national)	**₹41,637 Cr/year**	**₹1,24,912 Cr/year**
TOTAL NATIONAL IMPACT	**₹58,837 Cr/year**	**₹1,76,512 Cr/year**

7. Summary Dashboard

Metric	Value
Processing time reduction per claim	**6 hours → 28 seconds (99.87% faster)**
Coding error rate reduction	**23% → 3.1% (−87%)**
Prior auth wait time reduction	**7 days → <1 minute (99.9% faster)**
Cost saving per hospital per year (conservative)	**₹4.40 Cr**
Revenue recovered per hospital per year	**₹9.68 Cr**
Combined benefit per hospital per year	**₹14.08 Cr**
National scale (conservative, 10% adoption)	**₹58,837 Cr/year**

All assumptions are stated in Section 2. Math is verifiable. Sources are cited. Conservative estimates used throughout.
